# Everything I Know About You

A personal context summary generated from information you have shared with me in past conversations. This document is a summary, not a complete record of your life or private data.

## 1. Identity & Preferences

• You have used several names in past conversations. The latest preference I have is that you want to be called “Ishan.”

• You prefer to call the assistant “Buddy.”

• You generally prefer English.

• You are a BSc CSIT student under Tribhuvan University in Nepal and have previously described yourself as being in your second semester.

• You have mentioned Lalitpur as your location.

• You have previously described yourself as financially weak and mentioned family-related financial control.

• You have described yourself as introverted and have mentioned discomfort with eye contact, rejection, overthinking, and procrastination.

## 2. Learning Style & Academic Preferences

• You strongly prefer short, concise, exam-oriented answers for subjects such as DBMS, Computer Networks, Operating Systems, Theory of Computation, and Artificial Intelligence.

• You usually like an example when it makes a concept easier to understand.

• For technical questions, you often ask follow-up questions until the underlying idea is clear rather than just memorizing the definition.

• You have a recurring goal of mastering JavaScript and have asked to be quizzed on JavaScript topics.

## 3. JavaScript & Web Development

• Your JavaScript learning topics have included var/let/const, scope, primitive vs non-primitive values, type coercion, array methods, ES6, closures, DOM/events, Promises, fetch, and async/await.

• Your frontend stack has included React, Vite, Tailwind CSS, Chakra UI, MUI, shadcn/ui, Framer Motion, and GSAP.

• You have worked with React Router, Next.js App Router, NextAuth, Redux Toolkit, React Query/TanStack Query, React Hook Form, Formik, Yup, and Zod.

• You have worked with Node.js and Express.js, including Node.js v22.18.0.

• You have also been learning NestJS, including modules, DTOs, providers, dependency injection, Redis integration, JWT cookies, and CORS.

## 4. Databases, Backend & Infrastructure

• You have worked with MongoDB, MongoDB Atlas, PostgreSQL/Neon, SQLite-based Turso, Drizzle ORM, Prisma, and Redis.

• You have used Redis locally, RedisInsight, Upstash, and BullMQ.

• You have worked with Socket.IO and WebSockets.

• You have used Docker, Ubuntu, WSL, nginx, Vercel, Render, and Turso CLI.

• You have worked with APIs and services including Resend, Google Gemini API, Stripe, Khalti, QStash, Appwrite, Firebase, and ImageKit.

• You have encountered and debugged issues involving Prisma migrations, Drizzle/libSQL/Turso connections, Redis authentication and connection timeouts, Gemini API quotas, Stripe webhooks, Vercel deployment, Render memory limits, CORS, cookies, image hosts, and browser push notifications.

# 5. Projects & Practical Work

• Projects you have discussed include a Firebase contact app, weather app, Zengram using Appwrite, quiz app, currency converter, blog site, subscription management system, and real-time scoreboard.

• Your subscription-management system tracks service renewals such as Netflix and Spotify and involved a database, APIs, Upstash reminders, email notifications, CORS, validation, Khalti, and Stripe.

• You implemented web push notifications with a service worker and VAPID. You found that Chrome worked while Brave's shields could interfere with push registration.

• You have worked on notification systems with fields such as id, createdAt, userId, type, title, content, isShown, isDelete, and isMarked.

# 6. Internship & Professional Experience

• You completed a three-month internship at Fasto as a React.js and Next.js Developer.

• Your internship work included frontend development for a quick-commerce vendor portal.

• You worked on bulk upload, discounts, RFQ functionality, variants, inventory management, pagination, promotion logic, and related UI forms.

• You worked with promotion concepts such as vendor/fasto/shared funding and BOGO, percentage, and fixed promotion types.

• You worked with MUI Dialog, TextField, Autocomplete, React Hook Form Controller/useFieldArray, and Zod validation.

• You also worked on Next.js rendering and caching concepts and helped with bug hunting.

• You developed a full blog application feature end-to-end, including backend and database work.

• You have asked for help preparing LinkedIn content and internship documentation.

# 7. Computer Science Topics You Have Studied

• Computer Networks: MAC vs IP, classful addressing, CIDR, IPv4 headers, NAT, broadcast types, static/dynamic routing, link-state vs distance-vector routing, RIP vs OSPF, IPv4-to-IPv6 transition, ICMP/ICMPv6, QoS, SDN, NGN, Hamming code, CRC, VLANs, ATM, HDLC, and PPP.

• Operating Systems: locality of reference, TLB, page tables, valid bits, clock page replacement, segmentation vs paging, FIFO/LRU/Second Chance, device management, DMA, RAID, disk scheduling, file allocation, inode, FAT, journaling, VFS, ext4, kernel modules, deadlocks, relocation/protection, and scheduling.

• DBMS: functional dependencies, BCNF, 4NF, 5NF, decomposition, relational algebra, SQL, ER diagrams, schema design, transaction states, serializability, two-phase locking, timestamp ordering, Thomas Write Rule, MVCC, snapshot isolation, WAL, checkpoints, recovery, shadow paging, and buffer management.

• TOC: DFA/NFA, Arden's theorem, pumping lemma, Turing machine encoding, CFG-to-PDA conversion, Chomsky Normal Form, regular grammar, and DFA-to-regular-expression conversion.

• Artificial Intelligence: Bayesian networks, uncertainty, fuzzy sets, machine learning, Naive Bayes, environment types, machine vision, rationality, Turing tests, CSPs, and approaches to defining AI.

# 8. Recent Technical Interests

• You have recently been exploring vector databases, vector indexes, embeddings, pgvector, and free/local embedding models.

• You have specifically been considering how embeddings can work with Node.js and systems such as Pinecone and pgvector.

• This suggests an increasing interest in AI application development and retrieval/vector-search architecture.

# 9. Personal Conversations & Communication

• You sometimes ask me to turn rough thoughts into simple, respectful messages.

• You have asked for Roman Nepali messages when communicating casually with friends.

• You have also asked for help writing professional messages, LinkedIn posts, internship-related documents, and other communication.

# 10. How You Tend to Use ChatGPT

• You frequently use ChatGPT as a technical learning companion and debugging partner.

• You often prefer direct answers first, followed by clarification only when necessary.

• When studying, you tend to ask a definition, then ask what it actually means, then request an example or a concrete conclusion.

• You also use ChatGPT for writing assistance, project planning, technical troubleshooting, and understanding unfamiliar technologies.

# 11. Important Note About This Summary

• This document only contains information available to me from your shared conversation context and saved memory.

• Some information may be outdated because you have changed or updated details over time.

• I do not treat this summary as a complete biography, and I do not have access to information you have never shared with me.

• Sensitive personal details are intentionally not expanded beyond what is necessary for a useful context summary.
